

LASH & BROW EXTENSIONS

Eyelash and eyebrow extensions are made of a variety of thin materials. Silk, Mink or Cashmere.

Post application of your extensions your eye or brow area maybe sore or tender, you may experience redness. This will pass within the hour.

Your eyes may water due to the fumes from the glue, this is your eyes way of dispersing the fume - completely normal.

Avoid washing your face for 3 hours post application.

The use of any oil based product will reduce the lifespan of your extensions, oil breaks down glue, so therefore your extensions will fall out quicker.

To remove makeup around the eye area we recommend oil free makeup wipes.

Mascara on the lash extensions will also shorten the lifespan of the extensions as most mascara is oil based.

You will be required to come for infills every 2-3 weeks.

Depending on your lash lifecycle you may require lash infills every 2 weeks. We cannot guarantee the longevity of lash or brow extensions due to the life cycle of your lashes.

Please avoid sleeping face down or side onto pillows as this will cause lashes to bend.

Do not pick extensions off as they are glued on, this will cause lash damage.

Use a lash or brow comb to comb lash and brow extensions and keep them tidy and in place.

If you experience any swelling or prolonged redness please come back for removal.

All express and cluster lashes must be removed after 2 weeks.
